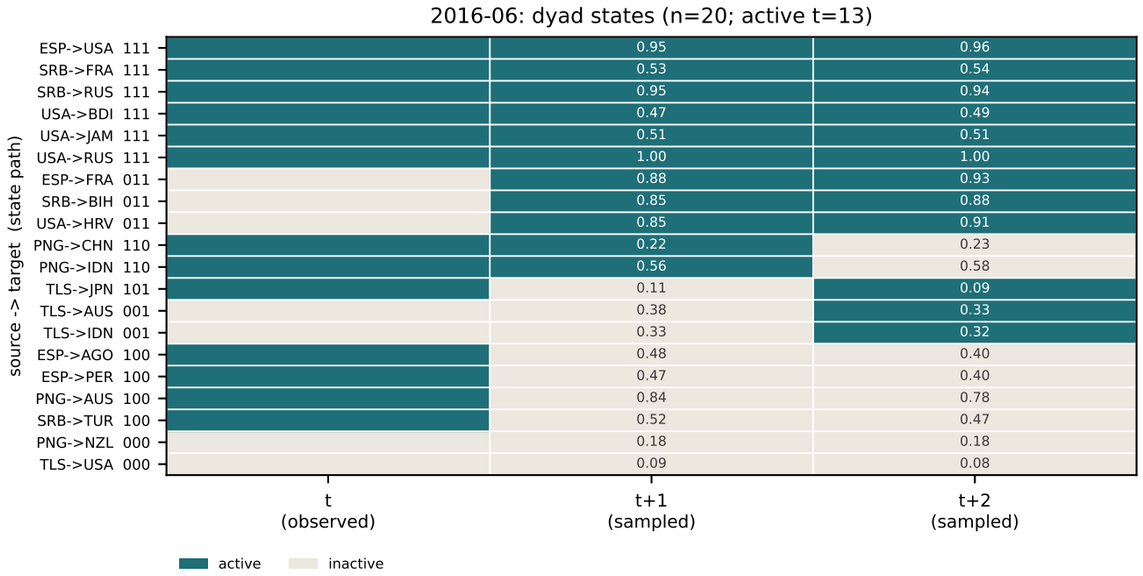
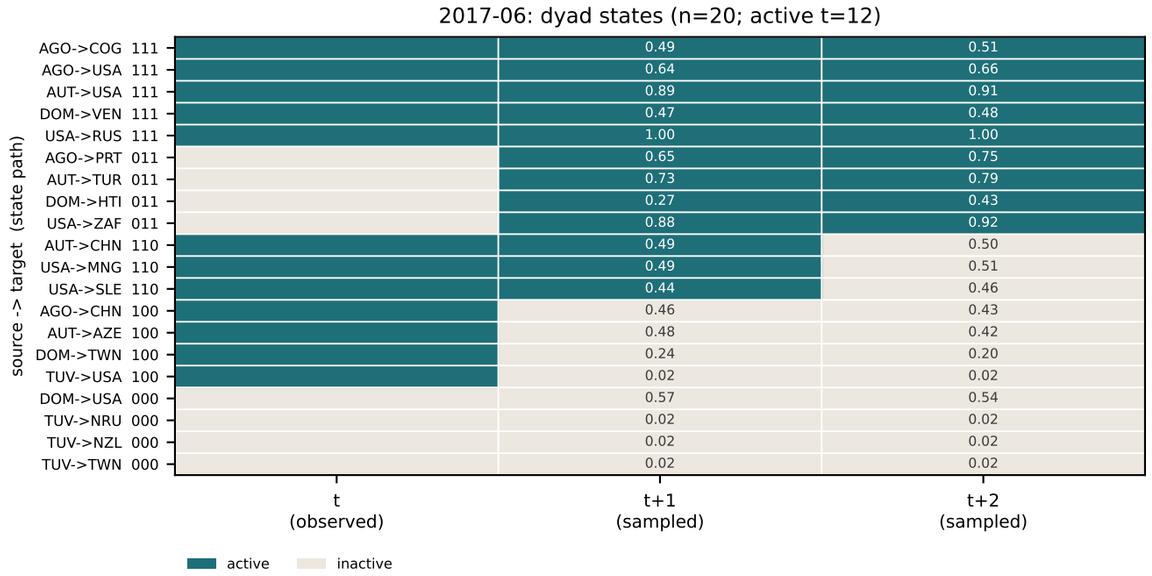
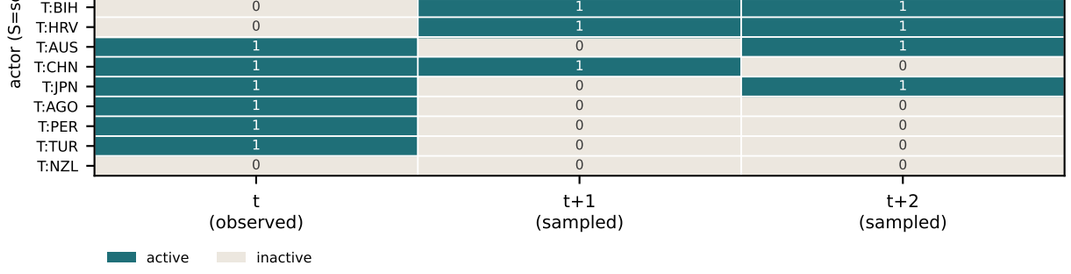
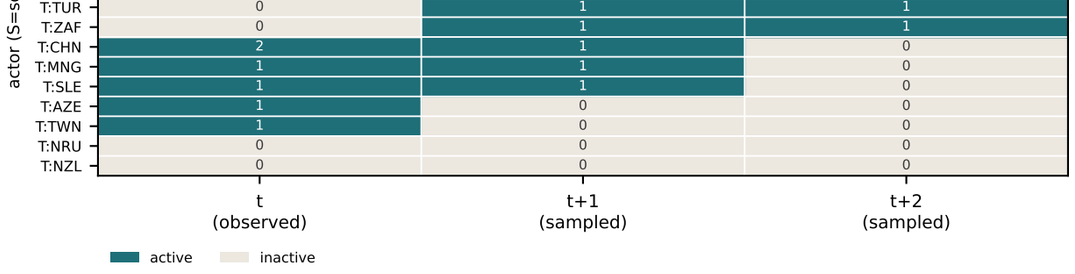
World-line preview (inner validation 2016-17): two representative anchors









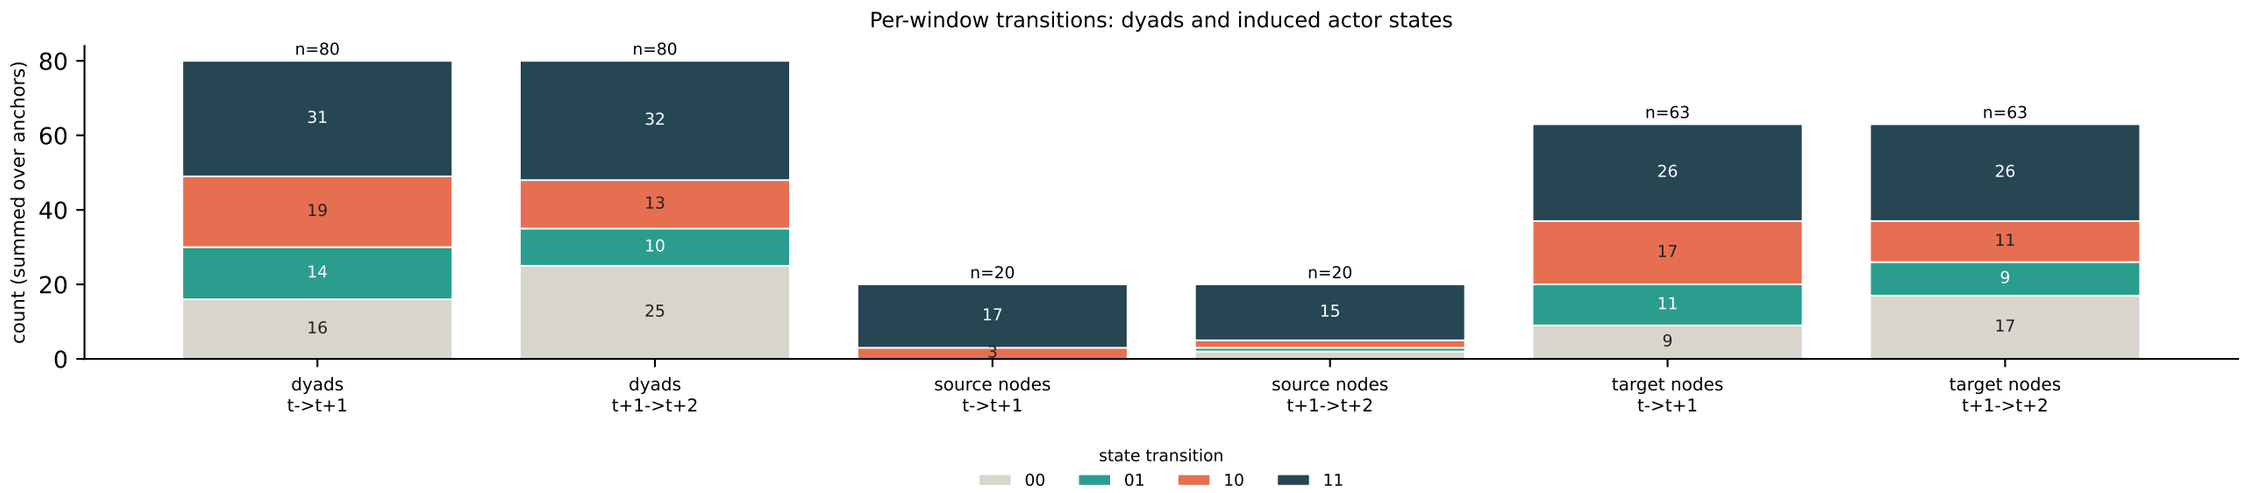


Figure shows 2016-06 and 2017-06; the trace covers all four anchors (2016-06, 2016-12, 2017-06, 2017-09).

ILLUSTRATIVE PREVIEW - NOT VALIDATED; NO MULTI-STEP ACCURACY CLAIM. Step 1 uses the frozen one-step model. Step 2 uses a state-lag-only approximation with static structural features frozen at the anchor. Actor states are induced by the sampled dyad subset, not the full network. The sample is selected for visibility, not random. No test labels were read.
