TUV→NRU	F	0	0.02	0.02

sample role: **P** persistent active **B** boundary active **I** inactive high-p **F** fill high-p fill: slate active, sand inactive

t = observed state; t+1/t+2 fill = sampled state, number = p; step 2 = state-lag-only, not validated

(b) Induced actor states, 2016-06

active sampled dyads per actor (0–4); projection not a node forecast; 5 of 15 targets shown

actor	t	t+1	t+2
S ESP	3	2	2
S PNG	3	2	0
S SRB	3	3	3
S TLS	1	0	3
S USA	3	4	4
T RUS	2	2	2
T FRA	1	2	2
T BDI	1	1	1
T IDN	1	1	1
T JAM	1	1	1

(c) Transition tallies, four anchors

counts, not rates; no accuracy is computed

rows = state at t; columns = next state

dyads (n=80)

t \ t+1	0	1
0	16	14
1	19	31

t→t+1

t+1 \ t+2	0	1
0	25	10
1	13	32

t+1→t+2

sources (n=20)

t \ t+1	0	1
0	0	0
1	3	17

t→t+1

t+1 \ t+2	0	1
0	2	1
1	2	15

t+1→t+2

targets (n=63)

t \ t+1	0	1
0	9	11
1	17	26

t→t+1

t+1 \ t+2	0	1
0	17	9
1	11	26

t+1→t+2

t+1 → t+2: state-lag-only approximation; no accuracy claim
